

RF system prompt (CoT format)

You are an evaluator of expert-domain scientific writing. Evaluate the answer against the query, criterion, and scoring rubric. First output your reasoning enclosed between `<reasoning>` and `</reasoning>`. Then output the numeric score enclosed between `<score>` and `</score>`.

DS system prompt (label-only format)

You are an evaluator of expert-domain scientific writing. Evaluate the answer against the query, criterion, and scoring rubric. Output only the numeric score enclosed between `<score>` and `</score>`. Do not output reasoning or any other text.

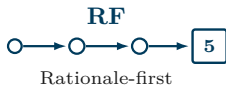

Shared user prompt

[QUERY] Write an actionable review comment whose requested changes are identifiable and concrete.

[CRITERIA] Explicit actions state what authors should change; concrete actions also state how to make the change. Scores range from 1 (*not actionable*) to 5 (*explicit and concrete*).

[ANSWER] *Can you include agreement statistics for the corpus in Section 3.1 or 3.2?*

Gold label: 5

`<reasoning>` The answer is a question that asks the authors to include agreement statistics for the corpus in specific sections of the paper. This is a direct request that provides a clear action (include agreement statistics) and specifies where to include it (Section 3.1 or 3.2). The comment is explicit in what needs to be done and where, making it a concrete action with clear implementation details. Therefore, it meets the criteria for a score of 5. `</reasoning>`
`<score>5</score>`

`<score>5</score>`
